

SOLAR A2 BOOK CRADLE

The Solar A2 Book Cradle has been designed to gently present a flat image to the scanning camera.

Books are placed by the operator on a soft sponge base or alternatively on the optional self adjusting balanced cradle. The unique design of the pivoted glass lid allows the operator to softly compress the book with minimum pressure.

The book cradle may be supplied as an integrated option on the Solar CopyMaster or alternatively as a standalone system for integration to most camera stands.
